Frequently Asked Questions:

Installing Windows 11 Process:

- **What do I need for the installation?**
  You'll need the following:
  - **Windows 11 ISO file**
  - **Access to the Boot Manager**
  - **Keyboard and mouse**
  - **Stable internet connection**
  - **1.5–2.5 hours of time**
  - *(Optional but recommended)* A valid Windows product key

- **Why am I getting an error stating: PC does not meet the Windows 11 requirements?**
  There is a way around this by bypassing the TPM and Secure Boot check:
  - **First press: "Shift + F10"** to pull up the command prompter
  - Enter "regedit" then create a new key under: HKEY_LOCAL_MACHINE\SYSTEM\Setup\LabConfig
  - Under the new key you will create 2 new DWORD values
    - BypassTPMCheck = 1
    - BypassSecureBootCheck = 1
  - Once done close the CMD and restart the installer and go from where you previously left off
  - **Make sure to save before closing the CMD**

Windows 11 Setup Process:

- **What user account should I use?**
    - You should not use the administrator accout for daily actuvities. More appropriately you should use the local account you had set up during the installation.
    - Using the administrator account on a daily basis leaves you more exposed to cyber threats and can elevate their danger simply by using the administrative account for daily uses.

- Do I need to update my Virtual Machine?
    - Yes, just like your physical computer you should make sure it uses the most up to date software. You should make sure that automatic updates is turned on to keep your Virtual Machine updates current.
    - This could also mean installing the latest patches as they are pushed out
