# Remote Access Setup

1. Login to Windows 11 VM.

2. Open command prompt and type "ipconfig".

3. Find the IPv4 Address and make note of it.

4. Click the search bar in the task bar and search "Control Panel". Then, click on it to open it.
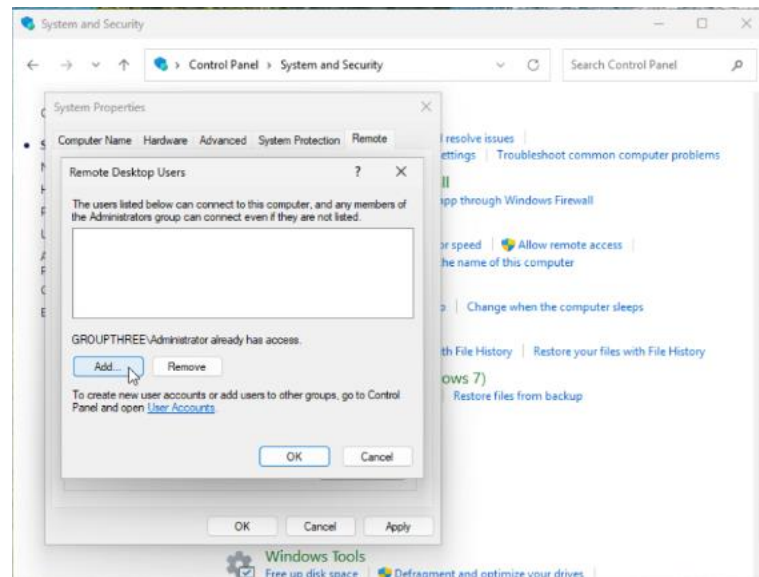

5. Click on System and Security.

6. Underneath the System section, click the "allow remote access" button.
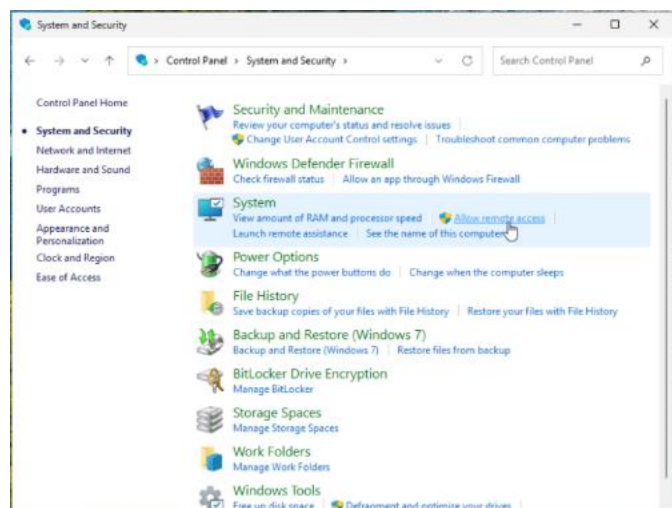

7. Click the "allow remote connections" option, then click apply.

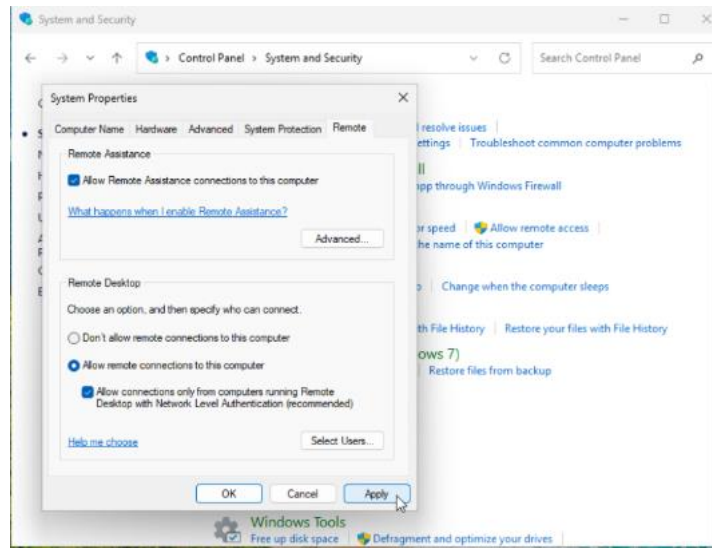

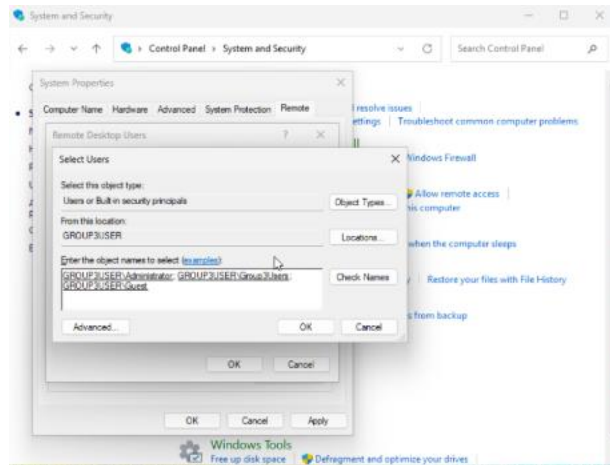

8. Click the "select users" button.

9. Select "add" --> Advanced --> Find Now.

10. Select users you wish to have remote access to the Windows 11 Virtual Machine.
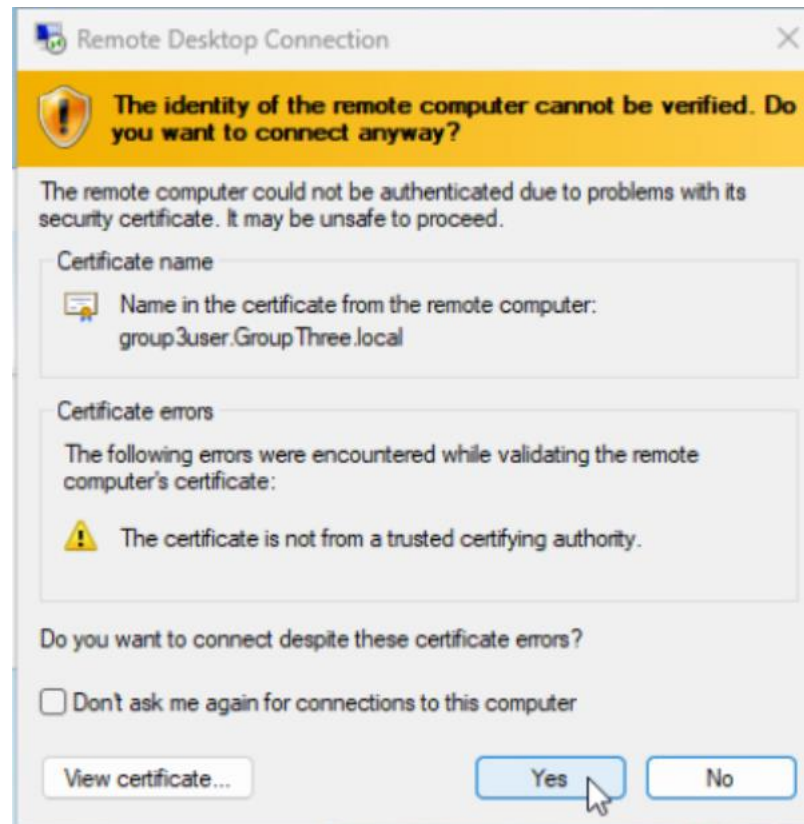

11. Turn on the Windows 11 Server, login, and search for "Remote Desktop Connection" and click to open.

12. Enter the IPv4 Address of the Windows 11 VM, then click connect.

13. Enter the admin password when asked

14. Click "Yes" to confirm

Remote Access Setup has now been completed
